1 Introduction

Beamer is an awesome way to make presentations with LaTeX, but its theme selection is surprisingly sparse. The stock themes share an aesthetic that can be a little cluttered, while the few distinctive custom themes available are often specialized for a particular corporate or institutional brand.

The goal of **metropolis** is to provide a simple, modern Beamer theme suitable for anyone to use. It tries to minimize noise and maximize space for content; the only visual flourish it offers is an (optional) progress bar added to each slide or to the section slides.

By default, **metropolis** uses Fira Sans, a gorgeous typeface commissioned by Mozilla and designed by Carrois. For best results, you will need the Fira typeface installed and use XHATEX to typeset your slides. However, **metropolis** can also be used with other typefaces and IATEX build systems.

metropolis's codebase is maintained on GitHub. If you have issues, find mistakes in the manual or want to help make the theme even better, please get in touch there. The full list of contributors already contains over a dozen names!

2 Getting Started

2.1 Installing from CTAN

For most users, we recommend installing **metropolis** from CTAN. If you keep your TEX distribution up-to-date, chances are good that **metropolis** is already installed. If it is not, you need to update your packages. If your distribution is TEX Live (or MacTEX on OS X), the following command updates all packages.

```
tlmgr update --all
```

If this results in an error, you may need to run it with administrative privileges:

```
sudo tlmgr update --all
```

MacTEX on OS X also provides a graphical interface for tlmgr called TEX Live Utility.

For any other distribution please refer to its documentation on how to update your packages.

To get the most out of the theme you should also install the Fira fonts. However, this is not mandatory; **metropolis** also works with the standard fonts.

2.2 Installing from GitHub

If you want to use the cutting-edge development version of **metropolis**, you can install it manually. Like any LATEX package, this involves four easy steps:

Download the source with a git clone of the metropolis repository or as a zip archive of the latest development version.

Compile the style files by running make sty inside the downloaded directory. (Or run LATEX directly on source/metropolistheme.ins.)

Move the resulting *.sty files to the folder containing your presentation. To use metropolis with many presentations, run make install or move the *.sty files to a folder in your TeX path instead.

Use the theme for your presentation by declaring \usetheme{metropolis} in the preamble of your Beamer document.

metropolis uses the Make build system to offer the following installation options for advanced users:

```
make sty builds the theme style files.
make doc builds this documentation manual.
make demo builds a demo presentation to test the features of metropolis.
make all builds the theme and manual.
make clean removes the files generated by make all.
make install installs the theme into your local texmf folder.
make uninstall removes the theme from your local texmf folder.
```

2.3 A Minimal Example

The following code shows a minimal example of a Beamer presentation using metropolis.

2.4 Dependencies

metropolis depends on the beamer class and the following standard packages:

- tikz etoolbox ifxetex
- pgfopts calc ifluatex

For best results, we recommend installing the fonts Fira Sans and Fira Mono and compiling with **metropolis** using XHMTEX or LuaTeX. These are optional dependencies; **metropolis** is compatible with (e.g.) pdfLMTEX and will fall back to standard fonts if Fira Sans or Fira Mono is not installed.

The packaged name of Fira Sans is Fira Sans OT in some Linux distributions; this case is automatically handled by **metropolis**.

2.5 Pandoc

To use this theme with Pandoc-based presentations, you can run the following command

```
$ pandoc -t beamer --latex-engine=xelatex -V theme:
    metropolis -o output.pdf input.md
```

3 Customization

3.1 Package options

The theme provides a number of options, which can be set using a key=value interface. The primary way to set options is to provide a comma-separated list of option-value pairs when loading **metropolis** in the preamble:

```
\usetheme[option1=value1, option2=value2, ...]{metropolis}
```

Options can be changed at any time — even mid-presentation! — with the \metroset macro.

```
\metroset{option1=newvalue1, option2=newvalue2, ...}
```

The list of options is structured as shown in the following example.

option key $\ \ list \ of \ possible \ values \dots \dots$ default

A short description of the option.

3.1.1 Main theme titleformat regular, smallcaps, allsmallcaps, allcaps regular Changes the format of titles, subtitles, section titles, frame titles, and the text on "standout" frames. The available options produce Regular, SMALLCAPS, ALLS-MALLCAPS, or ALLCAPS titles. Please refer to Section 6.1 for known issues with these options. titleformat plain regular, smallcaps, allsmallcaps, allcaps regular Changes the format of "standout" frames (see titleformat, above). 3.1.2 Inner theme none, simple, progressbar progressbar sectionpage Adds a slide at the start of each section (simple) with an optional thin progress bar below the section title (progressbar). The none option disables the section page. none, simple, progressbar none subsectionpage Optionally adds a slide at the start of each subsection. If enabled with the simple or progressbar options, the style of the section page will be updated to match the style of the subsection page. Note that section slides and subsection slides can appear consecutively if both are enabled; you may want to use this option together with sectionpage=none depending on the section structure of your presentation. 3.1.3 Outer theme numbering none, counter, fraction counter Controls whether the frame number at the bottom right of each slide is omitted

(fraction).

progressbar

(none), shown (counter) or displayed as a fraction of the total number of frames

none, head, frametitle, foot......none

Optionally adds a progress bar to the top of each frame (head), the bottom of

each frame (foot), or directly below each frame title (frametitle).

3.1.4 Color theme

block $transparent, fill \dots transparent$

Optionally adds a light grey background to block environments like theorem and example.

background dark, lightlight

Provides the option to have a dark background and light foreground instead of the reverse.

3.1.5 Font theme

titleformat title
titleformat subtitle
titleformat section
titleformat frame

regular, smallcaps, allsmallcaps, allcaps regular

Individually controls the format of titles, subtitles, section titles, and frame titles (see titleformat, above).

3.2 Color Customization

The included **metropolis** color theme is used by default, but its colors can be easily changed to suit your tastes. All of the theme's styles are defined in terms of three beamer colors:

- normal text (dark fg, light bg)
- alerted text (colored fg, should be visible against dark or light)
- example text (colored fg, should be visible against dark or light)

An easy way to customize the theme is to redefine these colors using

```
\strut = \{fg = \dots, bg = \dots\}
```

in your preamble. For greater customization, you can redefine any of the other stock beamer colors. In addition to the stock colors the theme defines a number of **metropolis** specific colors, which can also be redefined to your liking.

```
\setbeamercolor{progress bar}{ ... }
\setbeamercolor{title separator}{ ... }
\setbeamercolor{progress bar in head/foot}{ ... }
\setbeamercolor{progress bar in section page}{ ... }
```

For low-light situations **metropolis** it might be helpful to use the **metropolis-highcontrast** color theme. It is enabled like any other color theme:

\usecolortheme{metropolis-highcontrast}

3.3 Font Customization

The default font for **metropolis** is Fira. This can be easily changed using the standard font selection commands of the fontspec package. So if you prefer, for example, the **Ubuntu** font family, just add the following two commands after loading the **metropolis** theme.

```
\setsansfont{Ubuntu}
\setmonofont{Ubuntu Mono}
```

If you are expecting to present in a large room or with an underpowered projector, you may want to change the font to a heavier weight of Fira to maximize readability.

\setsansfont[BoldFont={Fira Sans SemiBold}]{Fira Sans Book}

3.3.1 Old style figures

The regular fontspec mechanism for changing glyph appearance applies also to this theme. If you want to have old style figures in the text but regular lined figures for math, you could add the following to your preamble:

3.4 Commands

3.4.1 Standout frames

The **metropolis** inner theme offers a custom frame format with large, centered text and an inverted background — perfect for focusing attention on single sentence or image. To use it, add the key **standout** to the frame:

```
\begin{frame}[standout]
    Thank you!
\end{frame}
```

4 pgfplots integration

metropolis comes with a set of pre-defined pgfplots styles and a color theme based on Paul Tol's color scheme.

4.1 Styles

Pass the following style keys to the axis environment to get the appropriate effect:

mlineplot Plot regular line charts with reduced axis frames, less intrusive legend and subdued grid.

mbarplot Plot vertical bar charts in a similar way as mlineplot but reduce grid usage.

horizontal mbarplot Plot horizontal bar charts.

disable thousands separator Helper style to remove thousands separator.

4.2 Paul Tol colors

A good presentation uses colors that are distinct from each other as much as possible as well as from black and white, can be discerned item under different lighting and display environments and by color-blind viewers, while matching well together.

In a technical note for SRON, Paul Tol proposed a palette of colors satisfying these constraints. The sub-package pgfplotsthemetol defines palettes for pgfplots charts based on Tol's work.

5 Tips & Tricks

5.1 Backup Slides

Speakers will often include extra slides at the end of their presentation to refer to during audience questions. One easy way to do this is to include the appendixnumberbeamer package in your preamble and call \appendix before your backup slides.

metropolis will automatically turn off slide numbering and progress bars for slides in the appendix.

6 Known Issues

6.1 Title formats

Be aware that not every font supports small caps, so the smallcaps or allsmallcaps options may not work if you use a font other than Fira Sans. In particular, the Computer Modern sans-serif typeface, which is used when metropolis is compiled with pdfLATEX, does not have a small-caps variant.

The title format options allsmallcaps and allcaps are quite nice from an aesthetic point of view, but their use of \MakeLowercase and \MakeUppercase can cause unexpected problems. For example:

- Some commands, like $\$ do not work inside $\$ and $\$ akeUppercase. (See #125)
- Only alphabetic characters are affected by \MakeLowercase, so numerals and punctuation remain at full height. This can spoil some of the aesthetic benefits of allsmallcaps. (See #33)
- \MakeLowercase and \MakeUppercase apply to math mode and \scshape does not. This can easily introduce mathematical errors that are hard to catch.
- It is impossible to typeset symbols which are encoded as uppercase letters in a different font. In particular, \mathbb and \mathcal letters will be replaced by other math glyphs. (See #153)

The allsmallcaps and allcaps options are safe to use if your titles contain only alphabetic characters and do not require the expansion of any macros.

6.2 Interactions with other color themes

metropolis can be used along with any other Beamer color theme, such as crane or seahorse. If you wish to do this, it is usually best to include the metropolis subpackages individually so the metropolis color theme is never loaded. This will prevent conflicts between the metropolis color theme and your preferred theme.

For example, overriding the color theme as follows may not work as expected because \usetheme{metropolis} loads the metropolis color theme, which defines a relationship between the frametitle background and the primary palette of the theme. Since seahorse assumes a different relationship between its palettes, the result is a grey, rather than periwinkle, frametitle background.

```
\usetheme{metropolis}
\usecolortheme{seahorse}
```

The correct colors are chosen if the **metropolis** outer, inner, and font themes are loaded seperately:

```
\useoutertheme{metropolis}
\usefonttheme{metropolis}
\usecolortheme{seahorse} % or your preferred color theme
```

Please note that **metropolis** may not use all the colors defined in your favourite Beamer color theme. In particular, **metropolis** does not set a background color for the title; this will cause issues when using color themes like **whale** which set a white foreground for the title.

6.3 Notes on second screen

If you use the [show notes on second screen] option built in to Beamer and compile with XHATEX, text on slides following the first section slide may be rendered in white instead of the regular colour. This is due to a bug in Beamer or XHATEX itself. You can work around it either by compiling with LuaTEX or by adding the following code to your preamble to reset the text color on each slide.

```
\makeatletter
\def\beamer@framenotesbegin{% at beginning of slide
```

```
\usebeamercolor[fg]{normal text}
    \gdef\beamer@noteitems{}%
    \gdef\beamer@notes{}%
}
\makeatother
```

6.4 Standout frames with labels

Because the standout frame option creates a group to restrict the colour change to a single slide, labels defined after calling standout will stay local to the group. In other words, the following may result in a "label undefined" error.

```
\begin{frame}[standout, label=conclusion]{Conclusion}
  Awesome slide
\end{frame}
```

To fix this problem, change the order of the keys in the frame.

```
\begin{frame}[label=conclusion, standout]{Conclusion}
    Awesome slide
\end{frame}
```

This error can be unwittingly triggered if you export your slides from Emacs Org mode, which automatically adds labels after frame options. Alex Branham offers the following solution for Org mode users, using org-set-property.

```
* Start of a frame
:PROPERTIES:
:BEAMER_opt: label=conclusion, standout
:END:
```

6.5 Standout frames with Pandoc

With Pandoc versions prior 1.17.2 it was not possible to create standout frames because Pandoc only supported a specific list of frame attributes thus ignoring additional attributes such as {.standout}.

7 License

metropolis is licensed under a Creative Commons Attribution-ShareAlike 4.0 International License. This means that if you change the theme and re-distribute it, you must retain the copyright notice header and license it under the same CC-BY-SA license. This does not affect any presentations that you create with the theme.

8 Implementation

8.1 metropolis parent theme

The primary job of this package is to load the component sub-packages of the **metropolis** theme and route the theme options accordingly. It also provides some custom commands and environments for the user.

8.1.1 Package dependencies

```
1 \RequirePackage{etoolbox}
2 \RequirePackage{pgfopts}
```

8.1.2 Options

Most options are passed off to the component sub-packages.

```
3 \pgfkeys{/metropolis/.cd,
4    .search also={
5    /metropolis/inner,
6    /metropolis/outer,
7    /metropolis/color,
8    /metropolis/font,
9  }
10 }
```

titleformat plain Controls the formatting of the text on standout "plain" frames.

```
11 \pgfkeys{
12  /metropolis/titleformat plain/.cd,
13    .is choice,
14   regular/.code={%
15   \let\metropolis@plaintitleformat\@empty%
```

```
16
        \setbeamerfont{standout}{shape=\normalfont}%
      },
17
      smallcaps/.code={%
18
        \let\metropolis@plaintitleformat\@empty%
19
        \setbeamerfont{standout}{shape=\scshape}%
20
      },
21
      allsmallcaps/.code={%
22
        \let\metropolis@plaintitleformat\MakeLowercase%
23
        \setbeamerfont{standout}{shape=\scshape}%
24
        \PackageWarning{beamerthememetropolis}{%
25
          Be aware that titleformat plain=allsmallcaps can lead to problems%
26
        }
27
      },
28
      allcaps/.code={%
29
        \let\metropolis@plaintitleformat\MakeUppercase%
30
        \setbeamerfont{standout}{shape=\normalfont}%
31
        \PackageWarning{beamerthememetropolis}{%
32
          Be aware that titleformat plain=allcaps can lead to problems%
33
        }
34
      },
35
36 }
```

titleformat Sets a standard format for titles, subtitles, section titles, frame titles, and the text on standout "plain" frames.

```
37 \pgfkeys{
38
    /metropolis/titleformat/.code=\pgfkeysalso{
        font/titleformat title=#1,
39
        font/titleformat subtitle=#1,
40
        font/titleformat section=#1,
41
        font/titleformat frame=#1,
42
        titleformat plain=#1,
43
44
      }
45 }
```

For backwards compatibility with earlier betas of the theme, we implement deprecated option names as aliases to the corresponding key=value options.

```
46 \pgfkeys{/metropolis/.cd,
47 usetitleprogressbar/.code=\pgfkeysalso{outer/progressbar=frametitle},
48 noslidenumbers/.code=\pgfkeysalso{outer/numbering=none},
```

```
usetotalslideindicator/.code=\pgfkeysalso{outer/numbering=fraction},
49
    nosectionslide/.code=\pgfkeysalso{inner/sectionpage=none},
50
    darkcolors/.code=\pgfkeysalso{color/background=dark},
51
    blockbg/.code=\pgfkeysalso{color/block=fill, inner/block=fill},
52
53 }
Set default values for options.
54 \mbox{ } \mbox{metropolis@setdefaults}{
    \pgfkeys{/metropolis/.cd,
      titleformat plain=regular,
57
    }
58 }
```

To avoid generating externalized figures of the progressbar we have to disable them with "tikzexternalenable" and "tikzexternaldisable". However, if the "external" libray is not loaded we would get undefined control sequence problems, hence we define them as no-ops if they are not defined yet.

```
59 \providecommand{\tikzexternalenable}{}
60 \providecommand{\tikzexternaldisable}{}
```

8.1.3 Component sub-packages

Having processed the options, we can now load the component sub-packages of the theme.

```
61 \useinnertheme{metropolis}
62 \useoutertheme{metropolis}
63 \usecolortheme{metropolis}
64 \usefonttheme{metropolis}

The tol theme for pgfplots is only loaded if pgfplots is used.
65 \AtEndPreamble{%
```

```
65 \AttendPreamble(%)
66 \@ifpackageloaded{pgfplots}{%
67 \RequirePackage{pgfplotsthemetol}
68 }{}
69 }
```

8.1.4 Custom commands

The parent theme defines custom commands as their proper usage may depend on multiple sub-packages.

\metroset Allows the user to change options midway through a presentation.

```
70 \newcommand{\metroset}[1]{\pgfkeys{/metropolis/.cd,#1}}
```

\plain Creates a plain frame with dark background, suitable for displaying images or a few words. The format of the text can be set with the titleformat plain option.

```
71 \def\metropolis@plaintitleformat#1{#1}
72 \newcommand{\plain}[2][]{%
    \PackageWarning{beamerthememetropolis}{%
73
      The syntax `\plain' may be deprecated in a future version of Metropolis.
74
      Please use a frame with [standout] instead.
75
76
77
    \begin{frame}[standout]{#1}
      \metropolis@plaintitleformat{#2}
78
79
    \end{frame}
80 }
```

\mreducelistspacing

81 \newcommand{\mreducelistspacing}{\vspace{-\topsep}}

8.1.5 Process package options

```
82 \metropolis@setdefaults
83 \ProcessPgfOptions{/metropolis}
```

8.2 metropolis inner theme

A beamer inner theme dictates the style of the frame elements traditionally set in the "body" of each slide. These include:

- title, part, and section pages;
- itemize, enumerate, and description environments;
- block environments including theorems and proofs;
- figures and tables; and
- footnotes and plain text.

8.2.1 Package dependencies

```
84 \RequirePackage{etoolbox}
85 \RequirePackage{keyval}
86 \RequirePackage{calc}
87 \RequirePackage{pgfopts}
88 \RequirePackage{tikz}
```

8.2.2 Options

sectionpage Optionally add a slide marking the beginning of each section.

```
89 \pgfkeys{
    /metropolis/inner/sectionpage/.cd,
90
      .is choice,
91
      none/.code=\metropolis@disablesectionpage,
92
      simple/.code={\metropolis@enablesectionpage
93
                     \setbeamertemplate{section page}[simple]},
94
      progressbar/.code={\metropolis@enablesectionpage
95
                          \setbeamertemplate{section page}[progressbar]},
96
97 }
```

subsectionpage Optionally add a slide marking the beginning of each subsection.

\metropolis@inner@setdefaults Set default values for inner theme options.

```
107 \newcommand{\metropolis@inner@setdefaults}{
108 \pgfkeys{/metropolis/inner/.cd,
109 sectionpage=progressbar,
110 subsectionpage=none
111 }
112 }
```

8.2.3 Title page

title page Template for the title page. Each element is only typset if it is defined by the user. If \subtitle is empty, for example, it won't leave a blank space on the title slide.

```
113 \setbeamertemplate{title page}{
114 \begin{minipage}[b][\paperheight]{\textwidth}
115 \ifx\inserttitlegraphic\@empty\else\usebeamertemplate*{title graphic}\fi
116 \vfill%
117 \ifx\inserttitle\@empty\else\usebeamertemplate*{title}\fi
118 \ifx\insertsubtitle\@empty\else\usebeamertemplate*{subtitle}\fi
119 \usebeamertemplate*{title separator}
```

Beamer's definition of \insertauthor is always nonempty, so we have to test another macro initialized by \author{...} to see if the user has defined an author. This solution was suggested by Enrico Gregorio in an answer to this Stack Exchange question.

```
120 \ifx\beamer@shortauthor\@empty\else\usebeamertemplate*{author}\fi
121 \ifx\insertdate\@empty\else\usebeamertemplate*{date}\fi
122 \ifx\insertinstitute\@empty\else\usebeamertemplate*{institute}\fi
123 \vfill
124 \vspace*{1mm}
125 \end{minipage}
126}
```

Normal people should use \maketitle or \titlepage instead of using the title page beamer template directly. Beamer already defines these macros, but we patch them here to make the title page [plain] by default, remove \@thanks, and ensure the title frame number doesn't count.

\maketitle Inserts the title frame, or causes the current frame to use the title page template.
\titlepage

```
127 \def\maketitle{%
128 \ifbeamer@inframe

```

progress bar in section page

Template for the progress bar displayed by default on the section page. This code is duplicated in large part in the outer theme's template progress bar in head/foot.

```
243 \newlength{\metropolis@progressonsectionpage}
244 \newlength{\metropolis@progressonsectionpage@linewidth}
246 \setbeamertemplate{progress bar in section page}{
247
    \setlength{\metropolis@progressonsectionpage}{%
      \textwidth * \ratio{\insertframenumber pt}{\inserttotalframenumber pt}%
248
249
    }%
    \tikzexternaldisable%
250
251
    \begin{tikzpicture}
252
      \fill[bg] (0,0) rectangle (\textwidth, \metropolis@progressonsectionpage@linewidth);
253
      fill[fg] (0,0) rectangle (\metropolis@progressonsectionpage, \metropolis@progressonsection
    \end{tikzpicture}%
254
    \tikzexternalenable%
255
256 }
```

The above code assumes that \insertframenumber is less than or equal to \inserttotalframenumber. However, this is not true on the first compile; in the absence of an .aux file, \inserttotalframenumber defaults to 1. This behaviour

could cause fatal errors for long presentations, as \metropolis@progressonsectionpage would exceed TEX's maximum length (16383.99999pt, roughly 5.75 metres or 18.9 feet). To avoid this, we increase the default value for \inserttotalframenumber; presentations with over 4000 slides will still break on first compile, but users in that situation likely have deeper problems to solve.

257 \def\inserttotalframenumber{100}

8.2.5 Block environments

block alerted block example

The three different block environments differ only in their colours. Rather than repeat the essentially the same template three times, we use the auxiliary macro \metropolis@block to define all three templates.

```
258 \newlength{\metropolis@blocksep}
259 \newlength{\metropolis@blockadjust}
260 \setlength{\metropolis@blocksep}{0.75ex}
261 \setlength{\metropolis@blockadjust}{0.25ex}
262 \providecommand{\metropolis@strut}{%
263 \vphantom{ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz()}%
264 }
265 \newcommand{\metropolis@block}[1]{
266 \par\vskip\medskipamount%
267 \setlength{\parskip}{0pt}
```

If a background color is defined for the block title or body, we need to add a little bit of padding to the corresponding box. Ideally, this would be accomplished by setting colsep=0.75ex, which is intended to add "color separation space" only when the box has a colored background. Unfortunately, colsep also adds this separation if the background color is inherited, even if the inherited color is actually empty. (The technical reason for this boils down to the fact that the \ifx directive does not expand macros.)

To achieve the correct spacing for alertblocks and exampleblocks as well as for normal blocks, we have to begin the beamercolorbox differently based on whether block title has an empty background.

If the block title background is empty, or the user has explicitly removed the background from (e.g.) block title alerted, we just need to set a rightskip for a nice ragged-right block title.

```
\ifbeamercolorempty[bg]{block title#1}{%
268
269
       \begin{beamercolorbox}[rightskip=0pt plus 4em]{block title#1}}{%
     \ifbeamercolorempty[bg]{block title}{%
270
       \begin{beamercolorbox}[rightskip=0pt plus 4em]{block title#1}%
271
272
    }%
273 %
       \end{macrocode}
274 %
275 %
       Otherwise, if the |block title| has a background, we set the padding based
       on |\metropolis@blockskip|. However, we have to visually compensate for
276 %
       the |\metropolis@strut| added to the block title (see below) by
277 %
278 %
       subtracting |\metropolis@blockadjust| from the top and bottom padding.
279 %
280 %
       \begin{macrocode}
     {%
281
       \begin{beamercolorbox}[
282
         sep=\dimexpr\metropolis@blocksep-\metropolis@blockadjust\relax,
283
         leftskip=\metropolis@blockadjust,
284
         rightskip=\dimexpr\metropolis@blockadjust plus 4em\relax
285
       ]{block title#1}%
286
     }}%
287
       \end{macrocode}
288 %
289 %
       We can now set the contents of the |block title|. The zero-width but
290 %
       positive-height box |\metropolis@strut| ensures that the block title box
291 %
292 %
       has a consistent height, even if it lacks punctuation, ascenders, or
       descenders.
293 %
294 %
295 %
       \begin{macrocode}
         \usebeamerfont*{block title#1}%
296
         \metropolis@strut%
297
298
         \insertblocktitle%
299
         \metropolis@strut%
300
     \end{beamercolorbox}%
       \end{macrocode}
301 %
302 %
       Next, we typeset the |block body|. This the code is similar to, but simpler
303 %
304 %
       than, the |block title| code since we don't need to adjust for any struts.
305 %
306 %
       \begin{macrocode}
     \nointerlineskip%
307
```

```
\ifbeamercolorempty[bg]{block body#1}{%
308
309
       \begin{beamercolorbox}[vmode]{block body#1}}{
     \ifbeamercolorempty[bg]{block body}{%
310
       \begin{beamercolorbox}[vmode]{block body#1}%
311
312
     }{%
       \begin{beamercolorbox}[sep=\metropolis@blocksep, vmode]{block body#1}%
313
       \vspace{-\metropolis@parskip}
314
    }}%
315
         \usebeamerfont{block body#1}%
316
         \setlength{\parskip}{\metropolis@parskip}%
317
318 }
This concludes the auxiliary macro \metropolis@block. Finally, we define the
block beamer templates using this macro.
319 \setbeamertemplate{block begin}{\metropolis@block{}}
320 \setbeamertemplate{block alerted begin}{\metropolis@block{ alerted}}
321 \setbeamertemplate{block example begin}{\metropolis@block{ example}}
322 \setbeamertemplate{block end}{\end{beamercolorbox}\vspace*{0.2ex}}
323 \setbeamertemplate{block alerted end}{\end{beamercolorbox}\vspace*{0.2ex}}
324 \setbeamertemplate{block example end}{\end{beamercolorbox}\vspace*{0.2ex}}
8.2.6 Lists and floats
325 \setbeamertemplate{itemize items}{\textbullet}
326 \setbeamertemplate{caption label separator}{: }
327 \setbeamertemplate{caption} [numbered]
8.2.7 Footnotes
328 \setbeamertemplate{footnote}{%
     \parindent Oem\noindent%
329
330
     \raggedright
     \usebeamercolor{footnote}\hbox to 0.8em{\hfil\insertfootnotemark}\insertfootnotetext\par%
331
332 }
       Text and spacing settings
333 \newlength{\metropolis@parskip}
334 \setlength{\metropolis@parskip}{0.5em}
335 \setlength{\parskip}{\metropolis@parskip}
336 \linespread{1.15}
```

By default, Beamer frames offer the c option to almost vertically center the text, but the placement is a little too high. To fix this, we redefine the c option to equalize \beamer@frametopskip and \beamer@framebottomskip. This solution was suggested by Enrico Gregorio in an answer to this Stack Exchange question.

```
337 \define@key{beamerframe}{c}[true]{% centered
338 \beamer@frametopskip=0pt plus 1fill\relax%
339 \beamer@framebottomskip=0pt plus 1fill\relax%
340 \beamer@frametopskipautobreak=0pt plus .4\paperheight\relax%
341 \beamer@framebottomskipautobreak=0pt plus .6\paperheight\relax%
342 \def\beamer@initfirstlineunskip{}%
343 }
```

8.2.9 Standout frames

metropolis offers a custom frame format with large, centered text and an inverted background. To use it, add the key standout to the frame: \begin{frame}[standout] ... \end{frame}.

standout Optional arguments to Beamer's frames are implemented using \define@key from the keyval package, which will execute code when the defined option is called. For the standout option, we begin a group, change the colors and set frame options.

```
344 \providebool{metropolis@standout}
345 \define@key{beamerframe}{standout}[true]{%
     \booltrue{metropolis@standout}
346
     \begingroup
347
       \setkeys{beamerframe}{c}
348
349
       \setkeys{beamerframe}{noframenumbering}
350
       \ifbeamercolorempty[bg]{palette primary}{
         \setbeamercolor{background canvas}{
351
           use=palette primary,
352
353
           bg=-palette primary.fg
         }
354
355
       }{
         \setbeamercolor{background canvas}{
356
           use=palette primary,
357
           bg=palette primary.bg
358
         }
359
       }
360
       \setbeamercolor{local structure}{
361
         fg=palette primary.fg
362
```

```
363 }
364 \usebeamercolor[fg]{palette primary}
365 }
```

Then we just have to close the group after the standout slide is finished in order to restore the colours and fonts for the rest of the presentation. Unfortunately, we cannot use or this (see http://tex.stackexchange.com/questions/226319/). Instead, we prepend the \endgroup to \beamer@reseteecodes, which is run exactly once at the end of each slide.

```
366 \pretocmd{\beamer@reseteecodes}{%
367  \ifbool{metropolis@standout}{
368   \endgroup
369   \boolfalse{metropolis@standout}
370   }{}
371 }{}{}
```

We set the fonts and the alignment on the inner content, in such a way that the speaker's note layout isn't affected by the custom formatting.

```
372 \AtBeginEnvironment{beamer@frameslide}{
373  \ifbool{metropolis@standout}{
374   \centering
375   \usebeamerfont{standout}
376   }{}
377 }
```

8.2.10 Process package options

```
378 \metropolis@inner@setdefaults
379 \ProcessPgfPackageOptions{/metropolis/inner}
```

8.3 metropolis outer theme

A beamer outer theme dictates the style of the frame elements traditionally set outside the body of each slide: the head, footline, and frame title.

8.3.1 Package dependencies

```
380 \RequirePackage{etoolbox}
381 \RequirePackage{calc}
382 \RequirePackage{pgfopts}
```

8.3.2 Options

383 \pgfkeys{

numbering Adds slide numbers to the bottom right of each slide.

```
/metropolis/outer/numbering/.cd,
            384
                    .is choice,
            385
                    none/.code=\setbeamertemplate{frame numbering}[none],
            386
                    counter/.code=\setbeamertemplate{frame numbering}[counter],
            387
                    fraction/.code=\setbeamertemplate{frame numbering}[fraction],
            388
            389 }
            Adds a progress bar to the top, bottom, or frametitle of each slide.
progressbar
            390 \pgfkeys{

                    },
            412
            413 }
```

\metropolis@outer@setdefaults Sets default values for outer theme options.

```
414 \newcommand{\metropolis@outer@setdefaults}{
415 \pgfkeys{/metropolis/outer/.cd,
416 numbering=counter,
417 progressbar=none,
418 }
419 }
```

8.3.3 Head and footline

All good beamer presentations should already remove the navigation symbols, but metropolis removes them automatically (just in case).

```
420 \setbeamertemplate{navigation symbols}{}
```

frame numbering Templates for the frame number. Can be omitted, shown or displayed as a fraction of the total frames.

```
421 \defbeamertemplate{frame footer}{none}{}
422 \defbeamertemplate{frame footer}{custom}[1]{ #1 }
423 \defbeamertemplate{frame numbering}{none}{}
424 \defbeamertemplate{frame numbering}{counter}{\insertframenumber}
425 \defbeamertemplate{frame numbering}{fraction}{
426 \insertframenumber/\inserttotalframenumber
427 }
```

headline Templates for the head- and footline at the top and bottom of each frame.

```
footline
         428 \defbeamertemplate{headline}{plain}{}
         429 \defbeamertemplate{footline}{plain}{%
               \begin{beamercolorbox}[wd=\textwidth, sep=3ex]{footline}%
         430
                 \usebeamerfont{page number in head/foot}%
         431
                 \usebeamertemplate*{frame footer}
         432
                 \hfill%
         433
         434
                 \usebeamertemplate*{frame numbering}
         435
               \end{beamercolorbox}%
         436 }
```

8.3.4 Frametitle

frametitle Templates for the frame title, which is optionally underlined with a progress bar.

```
437 \newlength{\metropolis@frametitle@padding}
                           438 \setlength{\metropolis@frametitle@padding}{2.2ex}
                           439 \newcommand{\metropolis@frametitlestrut@start}{
                                 \rule{Opt}{\metropolis@frametitle@padding +%
                           440
                           441
                                   \totalheightof{%
                                     \ifcsdef{metropolis@frametitleformat}{\metropolis@frametitleformat X}{X}\%
                                  }%
                           443
                           444
                                }%
                           445 }

481
     \end{beamercolorbox}
482
483 }
```

appendix Removes page numbering and per-slide progress bars when \appendix is called.

This makes it easier to include additional "backup slides" at the end of the pre-

sentation, especially in conjunction with the package appendixnumberbeamer.

```
484 \AtBeginDocument{%
485 \apptocmd{\appendix}{%
486 \pgfkeys{%
487 /metropolis/outer/.cd,
488 numbering=none,
489 progressbar=none}
490 }{}{}
491 }
```

8.3.5 Process package options

```
492 \metropolis@outer@setdefaults
493 \ProcessPgfPackageOptions{/metropolis/outer}
```

8.4 metropolis font theme

A beamer font theme sets the style of the font used in the document.

8.4.1 Package dependencies

```
494 \RequirePackage{etoolbox}
495 \RequirePackage{ifxetex}
496 \RequirePackage{ifluatex}
497 \RequirePackage{pgfopts}
```

8.4.2 Load Fira fonts

If the presentation is compiled with XeLATEX or LuaLATEX, the fontspec package is loaded and we search for the Fira fonts.

```
498 \ifboolexpr{bool {xetex} or bool {luatex}}{
499    \@ifpackageloaded{fontspec}{
500    \PassOptionsToPackage{no-math}{fontspec}}
501    }{
502    \RequirePackage[no-math]{fontspec}
503 }
```

\checkfont Checks if a font is installed; if not, fontsnotfound is increased.

```
504
     \newcounter{fontsnotfound}
     \newcommand{\checkfont}[1]{%
505
       \suppressfontnotfounderror=1%
506
       \int \int x = #1 at 10pt
507
508
       \selectfont
       \ifx\x\nullfont%
509
         \stepcounter{fontsnotfound}%
510
511
        \suppressfontnotfounderror=0%
512
513
     }
```

\iffontsavailable Resets the fontsnotfound counter and calls \checkfont for each font in the comma separated list in the first argument.

```
\newcommand{\iffontsavailable}[3]{%
515
       \setcounter{fontsnotfound}{0}%
516
       \expandafter\forcsvlist\expandafter%
517
       \checkfont\expandafter{#1}%
518
       \ifnum\value{fontsnotfound}=0%
519
         #2%
520
521
       \else%
         #3%
522
       \fi%
523
     }
524
```

We search for regular, italic, light, light italic, mono, and mono bold fonts under the default Fira Sans and Fira Mono names. If this fails, the suffix OT — used by some Linux distributions — will be tried. If this also fails, a warning will be displayed and the standard fonts will be used.

```
\iffontsavailable{Fira Sans Light,%
525
                        Fira Sans Light Italic,%
526
                        Fira Sans,%

titleformat aliases Allows titleformat title et al. to be used in the \usetheme declaration, where

LATEX automatically removes all spaces.

```
700 \pgfkeys{
701  /metropolis/font/.cd,
702  titleformattitle/.code=\pgfkeysalso{titleformat title=#1},
703  titleformatsubtitle/.code=\pgfkeysalso{titleformat subtitle=#1},
704  titleformatsection/.code=\pgfkeysalso{titleformat section=#1},
705  titleformatframe/.code=\pgfkeysalso{titleformat frame=#1},
706 }
```

\metropolis@font@setdefaults Sets default values for font theme options.

```
707 \newcommand{\metropolis@font@setdefaults}{
708 \pgfkeys{/metropolis/font/.cd,
709 titleformat title=regular,
710 titleformat subtitle=regular,
711 titleformat section=regular,
712 titleformat frame=regular,
713 }
714 }
```

We first define hooks to change the case format of the titles.

```
715 \def\metropolis@titleformat#1{#1}
716 \def\metropolis@subtitleformat#1{#1}
717 \def\metropolis@sectiontitleformat#1{#1}
718 \def\metropolis@frametitleformat#1{#1}
```

To make the uppercase and lowercase macros work in the title, subtitle, etc., we have to patch the appropriate beamer commands that set their values. This solution was suggested by Enrico Gregorio in an answer to this StackExchange question.

```
719 \patchcmd{\beamer@title}%
720 {\def\inserttitle{#2}}%
721 {\def\inserttitle{\metropolis@titleformat{#2}}}%
722 {}%
723 {\PackageError{beamerfontthememetropolis}{Patching title failed}\@ehc}
724 \patchcmd{\beamer@subtitle}%
725 {\def\insertsubtitle{#2}}%
726 {\def\insertsubtitle{\metropolis@subtitleformat{#2}}}%
```

```

8.4.5 Process package options

```
794 \metropolis@font@setdefaults
795 \ProcessPgfPackageOptions{/metropolis/font}
```

8.5 metropolis color theme

8.5.1 Package dependencies

 $796 \verb|\RequirePackage{pgfopts}|$

8.5.2 Options

block Optionally adds a light grey background to block environments like theorem and example.

```
797 \pgfkeys{
798  /metropolis/color/block/.cd,
799    .is choice,
800    transparent/.code=\metropolis@block@transparent,
801    fill/.code=\metropolis@block@fill,
802 }
```

colors Provides the option to have a dark background and light foreground instead of the reverse.

```
803 \pgfkeys{
804  /metropolis/color/background/.cd,
805    .is choice,
806    dark/.code=\metropolis@colors@dark,
807    light/.code=\metropolis@colors@light,
808 }
```

\metropolis@color@setdefaults Sets default values for color theme options.

```
809 \newcommand{\metropolis@color@setdefaults}{
810 \pgfkeys{/metropolis/color/.cd,
811 background=light,
812 block=transparent,
813 }
814 }
```

8.5.3 Base colors

```
815 \definecolor{mDarkBrown}{HTML}{604c38}
816 \definecolor{mDarkTeal}{HTML}{23373b}
817 \definecolor{mLightBrown}{HTML}{EB811B}
818 \definecolor{mLightGreen}{HTML}{14B03D}
```

8.5.4 Base styles

All colors in **metropolis** are derived from the definitions of **normal text**, alerted text, and example text.

```
819 \newcommand{\metropolis@colors@dark}{
     \setbeamercolor{normal text}{%
820
       fg=black!2,
821
       bg=mDarkTeal
822
823
     }
     \usebeamercolor[fg]{normal text}
824
825 }
826 \newcommand{\metropolis@colors@light}{
     \setbeamercolor{normal text}{%
827
       fg=mDarkTeal,
828
829
       bg=black!2
     }
830
831 }
832 \setbeamercolor{alerted text}{%
     fg=mLightBrown
834 }
835 \setbeamercolor{example text}{%
     fg=mLightGreen
837 }
```

8.5.5 Derived colors

The titles and structural elements (e.g. itemize bullets) are set in the same color as normal text. This would ideally done by setting normal text as a parent style, which we do to set titlelike, but this doesn't work for structure as its foreground is set explicitly in beamercolorthemedefault.sty.

```
838 \setbeamercolor{titlelike}{use=normal text, parent=normal text}
839 \setbeamercolor{author}{use=normal text, parent=normal text}
840 \setbeamercolor{date}{use=normal text, parent=normal text}
841 \setbeamercolor{institute}{use=normal text, parent=normal text}
842 \setbeamercolor{structure}{use=normal text, fg=normal text.fg}
```

The "primary" palette should be used for the most important navigational elements, and possibly of other elements. **metropolis** uses it for frame titles and slides.

```
843 \setbeamercolor{palette primary}{%
844 use=normal text,
845 fg=normal text.bg,
846 bg=normal text.fg
```

```
847 }
848 \setbeamercolor{frametitle}{%
849   use=palette primary,
850   parent=palette primary
851 }
```

The **metropolis** inner or outer themes optionally display progress bars in various locations. Their color is set by **progress** bar but the two different kinds can be customized separately. The horizontal rule on the title page is also set based on the progress bar color and can be customized with title **separator**.

```
852 \setbeamercolor{progress bar}{%
     use=alerted text,
853
     fg=alerted text.fg,
854
     bg=alerted text.fg!50!black!30
855
856 }
857 \setbeamercolor{title separator}{
858
     use=progress bar,
     parent=progress bar
859
860 }
861 \setbeamercolor{progress bar in head/foot}{%
     use=progress bar,
862
     parent=progress bar
863
864 }
865 \setbeamercolor{progress bar in section page}{
     use=progress bar,
867
     parent=progress bar
868 }
```

Block environments such as theorem and example have no background color by default. The option block=fill sets a background color based on the background and foreground of normal text. The option block=transparent reverts the block environments to an empty background, which can be useful if changing colors midpresentation.

```
869 \newcommand{\metropolis@block@transparent}{
870 \setbeamercolor{block title}{%
871    use=normal text,
872    fg=normal text.fg,
873    bg=
874 }
```

```
\setbeamercolor{block body}{
875
       bg=
876
     }
877
878 }
879 \newcommand{\metropolis@block@fill}{
     \setbeamercolor{block title}{%
880
       use=normal text,
881
       fg=normal text.fg,
882
       bg=normal text.bg!80!fg
883
884
885
     \setbeamercolor{block body}{
       use={block title, normal text},
886
       bg=block title.bg!50!normal text.bg
887
    }
888
889 }
890 \setbeamercolor{block title alerted}{%
       use={block title, alerted text},
891
       bg=block title.bg,
892
       fg=alerted text.fg
893
894 }
895 \setbeamercolor{block title example}{%
896
       use={block title, example text},
       bg=block title.bg,
897
       fg=example text.fg
898
899 }
900 \setbeamercolor{block body alerted}{use=block body, parent=block body}
901 \setbeamercolor{block body example}{use=block body, parent=block body}
Footnotes
902 \setbeamercolor{footnote}{fg=normal text.fg!90}
```

903 \setbeamercolor{footnote mark}{fg=.}

We also reset the bibliography colors in order to pick up the surrounding colors at the time of use. This prevents us having to set the correct color in normal and standout mode.

```
904\setbeamercolor{bibliography entry author}{fg=, bg=}
905 \setbeamercolor{bibliography entry title}{fg=, bg=}
906 \setbeamercolor{bibliography entry location}{fg=, bg=}
907 \setbeamercolor{bibliography entry note}{fg=, bg=}
```

8.5.6 Process package options

```
908 \metropolis@color@setdefaults
909 \ProcessPgfPackageOptions{/metropolis/color}
910 \mode<all>
```

8.6 Tol pgfplots theme

Paul Tol's 12-color palette¹ is as follows:

```
911 \definecolor{TolDarkPurple}{HTML}{332288}
912 \definecolor{TolDarkBlue}{HTML}{6699CC}
913 \definecolor{TolLightBlue}{HTML}{88CCEE}
914 \definecolor{TolLightGreen}{HTML}{44AA99}
915 \definecolor{TolDarkGreen}{HTML}{117733}
916 \definecolor{TolDarkBrown}{HTML}{999933}
917 \definecolor{TolDarkBrown}{HTML}{DDCC77}
918 \definecolor{TolDarkRed}{HTML}{661100}
919 \definecolor{TolLightRed}{HTML}{CC6677}
920 \definecolor{TolLightPink}{HTML}{882255}
921 \definecolor{TolDarkPink}{HTML}{8844499}
```

To use these colors, we describe "cycle lists" from which PGF chooses styles for the different series in a chart.

mbarplot cycle Colors and styles intended for bar charts with up to 12 series.

```
923 \pgfplotscreateplotcyclelist{mbarplot cycle}{%
924
     {draw=TolDarkBlue,
                            fill=TolDarkBlue!70},
     {draw=TolLightBrown,
                            fill=TolLightBrown!70},
925
     {draw=TolLightGreen,
                           fill=TolLightGreen!70},
926
     {draw=TolDarkPink,
                            fill=TolDarkPink!70},
927
     {draw=TolDarkPurple,
                            fill=TolDarkPurple!70},
928
     {draw=TolDarkRed,
                            fill=TolDarkRed!70},
929
930
     {draw=TolDarkBrown,
                            fill=TolDarkBrown!70},
     {draw=TolLightRed,
                            fill=TolLightRed!70},
931
     {draw=TolLightPink,
                            fill=TolLightPink!70},
932
     {draw=TolLightPurple, fill=TolLightPurple!70},
933
```

 $^{^1{\}rm Tol}$ actually describes several palettes; these colours are taken from the bottom row of Figure 3 in his technical note.

```
934 {draw=TolLightBlue, fill=TolLightBlue!70},
935 {draw=TolDarkGreen, fill=TolDarkGreen!70},
936}
```

mlineplot cycle Colors and styles intended for line charts with up to 4 series.

```
937 \pgfplotscreateplotcyclelist{mlineplot cycle}{%

938 {TolDarkBlue, mark=*, mark size=1.5pt},

939 {TolLightBrown, mark=square*, mark size=1.3pt},

940 {TolLightGreen, mark=triangle*, mark size=1.5pt},

941 {TolDarkBrown, mark=diamond*, mark size=1.5pt},

942}
```

However, the above cycle lists are not applied automatically. We still need to define styles — mlineplot and mbarplot — that the user can apply to the axis of a pgfplots chart to use the colors. We'll also take the opportunity to adjust the display of chart axes when these styles are used.

```
943 \pgfplotsset{
944 compat=1.9,
```

mlineplot A style to apply to the axis of a PGF line plot.

```
mlineplot/.style={
945
       mbaseplot,
946
       xmajorgrids=true,
947
       ymajorgrids=true,
948
       major grid style={dotted},
949
       axis x line=bottom,
950
       axis y line=left,
951
       legend style={
952
953
         cells={anchor=west},
         draw=none
954
       },
955
956
       cycle list name=mlineplot cycle,
957
     },
```

mbarplot A style to apply to the axis of a PGF bar chart. mbarplot uses vertical bars horizontal mbarplot by default, while horizontal mbarplot has horizontal bars as the name implies.

Their shared properties are factored out into the internal style mbarplot base.

```
mbarplot base/.style={
           958
           959
                  mbaseplot,
                  bar width=6pt,
           960
                   axis y line*=none,
           961
           962
                },
                mbarplot/.style={
           963
                  mbarplot base,
           964
                  ybar,
           965
                  xmajorgrids=false,
           966
                  ymajorgrids=true,
           967
                   area legend,
           968
                  legend image code/.code={%
           969
                     \draw[#1] (0cm,-0.1cm) rectangle (0.15cm,0.1cm);
           970
                  },
           971
                   cycle list name=mbarplot cycle,
           972
                },
           973
                horizontal mbarplot/.style={
           974
                  mbarplot base,
           975
                  xmajorgrids=true,
           976
                  ymajorgrids=false,
           977
                  xbar stacked,
           978
           979
                  area legend,
                  legend image code/.code={%
           980
                     \draw[#1] (0cm,-0.1cm) rectangle (0.15cm,0.1cm);
           981
                  },
           982
                   cycle list name=mbarplot cycle,
           983
           984
                },
          Adjusts the appearance of the axes in a PGF chart.
{\tt mbaseplot}
                mbaseplot/.style={
           985
                  legend style={
